Mini Project: Click Counter

JavaScript Course, Beginner Project

Your Mission

Build a small web page with a number on it and a button. Every time you click the button, the number goes up by one. This is your first step into JavaScript: making a page respond when someone clicks.

HTML Requirements

Your page must include all of the following:

- The basic HTML skeleton (`<html>` , `<head>` , `<body>`) and a page `<title>`
- **A heading** (use `<h1>`) such as "Click Counter"
- **A number display** that starts at 0 (use a `<p>` or `<span>` with an `id`)
- **A "Click me" button** (use `<button>` with an `id`)
- **A "Reset" button** (use `<button>` with an `id`)
- **Your JavaScript file** linked with a `<script>` tag at the **end of the** **`<body>`**

CSS Requirements

Your CSS must be in a separate file called `style.css` and linked from your HTML page. It must include all of the following:

- A **background color** and **font family** for the page
- **Centered text** (`text-align`)
- A **large font size** for the number (`font-size`)
- **Padding**, a **background color**, and **rounded corners** on the buttons
- A **hover effect** on the buttons (`button:hover`)

JavaScript Requirements

Your JavaScript must be in a separate file called `script.js` . It must include all of the following:

- A **variable** that stores the count, starting at 0 (use `let`)
- A way to **find your HTML elements** by their `id` (use `document.getElementById`)
- A **click event** on the "Click me" button (use `addEventListener`)
- Code that **adds 1** to the count each click
- Code that **shows the new number** on the page (use `textContent`)
- A **Reset button** that sets the count back to 0 and updates the page

File Setup

1. Create a folder called `click-counter`.
2. Inside it, create three files: `click-counter.html`, `style.css`, and `script.js`.
3. Open the HTML file in your browser. To see errors, press **F12** and open the **Console** tab.

Checklist

Tick each box when you are done.

- [ ] My page shows a heading, a number, and two buttons
- [ ] Clicking "Click me" adds 1 to the number
- [ ] Clicking "Reset" sets the number back to 0
- [ ] My `<script>` tag is at the end of the `<body>`
- [ ] My CSS file is linked and my page has color
- [ ] My buttons change when I hover over them
- [ ] I tested my page by refreshing it in the browser

Bonus Challenges (If You Finish Early)

1. **Message at 10:** Show a message such as "You reached 10!" when the count gets to 10.
2. **Color change:** Make the number turn a different color when it is above 5 (use `style.color`).
3. **Minus button:** Add a third button that subtracts 1.
4. **No negatives:** Make sure the count can never go below 0.
5. **Double click:** Add a button that adds 2 instead of 1.

Stuck? Try This

- **Nothing happens when I click:** Open the Console (F12) and look for a red error. Check that the `id` names in your HTML match the ones in `script.js` exactly.
- **The error says "null":** Your script ran before the page loaded. Move the `<script>` tag to the end of the `<body>`.
- **The number shows as 01, 011, 0111:** JavaScript is joining text instead of adding. Make sure the count variable is a number (`0`) and not text (`"0"`).
- **Nothing changed:** Save all files, then refresh the browser.

Show Off Your Work

When you are finished, let a classmate click the button and explain in one sentence what your JavaScript does. Have fun!
