Mini Project: Bootstrap Profile Cards

Bootstrap Course, Beginner Project

Your Mission

Build a page with three profile cards in a row, using **Bootstrap** instead of writing all the CSS yourself. Each card introduces a person, a pet, or a favorite character. Bootstrap's grid and card classes do most of the styling work for you.

HTML Requirements

Your page must include all of the following:

- The basic HTML skeleton (`<html>` , `<head>` , `<body>`) and a page `<title>`
- A **viewport meta tag** in the `<head>` so the page works on phones
- **Bootstrap's CSS** added with a `<link>` tag in the `<head>` (copy the link from the "Get started" page at getbootstrap.com)
- A **page heading** (use `<h1>`) such as "Meet the Team"
- A **container** that wraps all your content (use the `container` class)
- **One row** containing **three columns** (use the `row` and `col-md-4` classes)
- **One card in each column** (use the `card` and `card-body` classes)
- **Inside each card:** a title (`card-title`), a short description (`card-text`), and a button (`btn`)

Bootstrap and CSS Requirements

Use Bootstrap classes for the styling. You do not need to write a lot of CSS. Your page must include all of the following:

- A **colored button** on every card (for example `btn btn-primary`)
- **Spacing** between the heading and the cards (use a margin class such as `my-4`)
- **Centered heading text** (use a class such as `text-center`)
- A **different button color** on each of the three cards
- **At least one rule of your own** in a separate `style.css` file, for example a page background color, linked after Bootstrap

File Setup

1. Create a folder called `bootstrap-profile-cards`.
2. Inside it, create two files: `bootstrap-profile-cards.html` and `style.css`.
3. Open the HTML file in your browser. You need an internet connection for Bootstrap to load.

Checklist

Tick each box when you are done.

- [ ] Bootstrap is linked in the `<head>` and my page looks styled
- [ ] My page has a heading, a container, one row, and three columns
- [ ] Each column has a card with a title, text, and a button
- [ ] Each button has a different color
- [ ] My own `style.css` file is linked and changes something
- [ ] I resized my browser window and the cards stack on small screens
- [ ] I tested my page by refreshing it in the browser

Bonus Challenges (If You Finish Early)

1. **Card images:** Add a picture to the top of each card (use the `card-img-top` class).
2. **Navbar:** Add a Bootstrap navigation bar above the heading.
3. **Shadow:** Add a shadow to each card (use the `shadow` class).
4. **More cards:** Add a second row of three cards.
5. **Hover effect:** Write your own CSS so a card lifts up slightly when the mouse is over it.

Stuck? Try This

- **My page has no styling:** Check that the Bootstrap `<link>` is inside `<head>`, the link is copied exactly, and you are connected to the internet.
- **My cards are stacked, not in a row:** Make sure the cards are inside `row` and each is inside a column such as `col-md-4`. Cards also stack on narrow windows, which is normal.
- **My own CSS is ignored:** Link `style.css` after the Bootstrap link so your rules come last.

- **Nothing changed:** Save both files, then refresh the browser.

Show Off Your Work

When you are finished, show your cards to a classmate, then make your browser window narrow to show how the cards stack on a phone. Have fun!
