# Mini Project: My CV Page

*HTML & CSS Course, Beginner Project*

## Your Mission

Build a one-page CV (curriculum vitae) that introduces **you**. You will stack your information from top to bottom, then use CSS to make it neat and professional.

## HTML Requirements

Your page must include all of the following:

- The basic HTML skeleton ( `<html>` , `<head>` , `<body>` ) and a page `<title>`
- **Your name** as the big title (use `<h1>` )
- **One picture** of you, or an avatar, with an `alt` description (use `<img>` )
- **A short "About Me" paragraph** of 2 to 3 sentences, written in your own words (use `<p>` )
- **Three section headings**: "Skills", "Education", and "Hobbies" (use `<h2>` )
- **A list of 3 to 5 skills** under the Skills heading (use `<ul>` and `<li>` )
- **A list of 3 to 5 hobbies** under the Hobbies heading (use `<ul>` and `<li>` )
- **A short line** under the Education heading with your school and grade (use `<p>` )
- **A contact link** such as your email, using `mailto:` (use `<a>` )

## CSS Requirements

Your CSS must be in a separate file called `style.css` and linked from your HTML page. It must include all of the following:

- A **background color** for the page
- A **font family** for the page
- **Centered text** ( `text-align` )
- A **color** for your name and a different color for your section headings
- A **width** and **rounded corners** ( `border-radius` ) for your picture
- A **border** and some **padding** around your lists

- A **hover effect** on your contact link ( `a:hover` )

## Step 1: Set Up Your Files

1. Create a folder called `cv`.
2. Inside it, create two files: `index.html` and `style.css`.
3. Save your picture in the same folder.

## Step 2: Write the HTML

Copy this example into `index.html`, then replace the text with your own information.

```
<!DOCTYPE html>
<html>
<head>
  <title>My CV</title>
  <!-- This line connects your CSS file -->
  <link rel="stylesheet" href="style.css">
</head>
<body>

  <!-- 1. Your name -->
  <h1>Sam Johnson</h1>

  <!-- 2. Your picture (change photo.jpg to your file name) -->
  <img src="photo.jpg" alt="A picture of Sam">

  <!-- 3. About Me -->
  <p>Hi! I am a creative student who loves learning new things. Write 2 or 3
sentences about yourself here.</p>

  <!-- 4. Skills -->
  <h2>Skills</h2>
  <ul>
    <li>Skill number one</li>
    <li>Skill number two</li>
    <li>Skill number three</li>
  </ul>

  <!-- 5. Education -->
  <h2>Education</h2>
```

```
  <p>Write your school name and grade here.</p>

  <!-- 6. Hobbies -->
  <h2>Hobbies</h2>
  <ul>
    <li>Hobby number one</li>
    <li>Hobby number two</li>
    <li>Hobby number three</li>
  </ul>

  <!-- 7. Contact link -->
  <a href="mailto:me@example.com">Contact me</a>

</body>
</html>
```

## Step 3: Add the CSS

Copy this example into `style.css`. Then change the colors and sizes to make it yours.

```
body {
  background-color: aliceblue;
  font-family: Arial, sans-serif;
  text-align: center;
}

h1 {
  color: darkslateblue;
}

h2 {
  color: seagreen;
}

img {
  width: 200px;
  border-radius: 10px;
}

p {
  width: 400px;
  margin: 20px auto;
```

```
}

ul {
  border: 3px solid seagreen;
  padding: 20px;
  width: 300px;
  margin: 0 auto;
  list-style-position: inside;
}

a {
  color: darkslateblue;
}

a:hover {
  color: hotpink;
}
```

## Step 4: Make It Yours

Try changing these one at a time and refresh your browser after each change:

- The `background-color` of the page
- The `color` of your name and your headings
- The `font-family`
- The `width` of your picture
- The `border` style of the lists (try `solid`, `dashed`, or `dotted`)

**Tip:** You can use color names like `seagreen` and `skyblue`, or look up color codes like `#2e8b57`.

## Checklist

Tick each box when you are done.

- [ ] My page has my name as an `<h1>` title
- [ ] My picture shows up on the page
- [ ] I wrote an About Me paragraph in my own words
- [ ] My page has Skills, Education, and Hobbies sections with `<h2>` headings

- [ ] My lists have at least 3 items each
- [ ] My contact link is on the page
- [ ] My CSS file is linked and my page has color
- [ ] I tested my page by refreshing it in the browser

## Bonus Challenges (If You Finish Early)

1. **New font:** Choose a font from Google Fonts and use it for your name.
2. **Section borders:** Add a bottom border under each `<h2>` heading.
3. **Languages:** Add a fourth section called "Languages" with a list of the languages you speak.
4. **Extra links:** Add a second link, such as your favorite website.
5. **Card look:** Put all your content inside a `<div>` with a white background, a border, and padding, centered on the page.

## Stuck? Try This

- **My picture is missing:** Check that the file name and extension match exactly, and that the picture is in the same folder as `index.html`.
- **My CSS isn't working:** Make sure the `<link>` line is inside `<head>` and the file is named `style.css`.
- **My email link does nothing:** Check that it starts with `mailto:`, for example `mailto:me@example.com`.
- **Nothing changed:** Save both files, then refresh the browser.

## Show Off Your Work

When you are finished, show your CV to a classmate and explain one thing you changed with CSS. Have fun!
