Mini Project: Traffic Light

HTML & CSS Course, Beginner Project

Your Mission

Build a traffic light using only `div` elements and CSS. You will make a dark box with three circles inside it: red, yellow, and green.

HTML Requirements

Your page must include all of the following:

- The basic HTML skeleton (`<html>` , `<head>` , `<body>`) and a page `<title>`
- **One wrapper `div`** for the traffic light box
- **Three `div` elements** inside the wrapper, one for each light
- A **class name** on each light (for example `red` , `yellow` , `green`)

CSS Requirements

Your CSS must be in a separate file called `style.css` and linked from your HTML page. It must include all of the following:

- A **width**, **height**, and dark **background color** for the wrapper
- **Padding** inside the wrapper
- **Rounded corners** (`border-radius`) on the wrapper
- A **width** and **height** for each light (use the same value for both)
- **Circles** using `border-radius: 50%` on each light
- A different **background color** for each light (red, yellow, and green)
- **Space between the lights** using `margin`
- The traffic light **centered horizontally** on the page using `margin: 0 auto`

File Setup

1. Create a folder called `trafficlight` .
2. Inside it, create two files: `index.html` and `style.css` .

Checklist

Tick each box when you are done.

- [ ] My page has one wrapper `div` with three `div` lights inside
- [ ] Each light has its own class name
- [ ] My lights are circles, not squares
- [ ] My lights are red, yellow, and green
- [ ] My traffic light is centered on the page
- [ ] My CSS file is linked and my page has color
- [ ] I tested my page by refreshing it in the browser

Bonus Challenges (If You Finish Early)

1. **Page background:** Give the page a background color, such as light blue sky.
2. **Glow effect:** Add a `box-shadow` to each light so it looks like it is glowing.
3. **Hover effect:** Make a light change color or glow brighter when the mouse is over it (`:hover`).
4. **Pole:** Add a thin gray `div` under the box to make it look like a traffic light pole.

Stuck? Try This

- **My lights are squares:** Check that `border-radius: 50%` is on the light classes and that width and height are equal.
- **My lights are all the same color:** Make sure each `div` has a different class name and each class has its own `background-color`.
- **My box is not centered:** `margin: 0 auto` only works when the box has a width.
- **Nothing changed:** Save both files, then refresh the browser.

Show Off Your Work

When you are finished, show your traffic light to a classmate and explain how you made the lights round. Have fun!
