Mini Project: My Favorite Things Poster

HTML & CSS Course, Beginner Project

Name: _____ Date: _____

Your Mission

Build a one-page poster about **one thing you love**. It can be a food, an animal, a game, a sport, or a hobby. You will stack your content from top to bottom, then use CSS to make it colorful and fun.

Your Page Must Include

- **A big title** such as "Why I Love Pizza" (use `<h1>`)
- **One picture** (use `<img>`)
- **A short paragraph** about your favorite thing (use `<p>`)
- **A list of 3 to 5 reasons** you love it (use `<ul>` and `<li>`)
- **A link** to a website about it (use `<a>`)

Step 1: Set Up Your Files

1. Create a new folder called `poster`.
2. Inside it, create two files: `index.html` and `style.css`.
3. Save a picture in the same folder (for example `photo.jpg`).

Step 2: Write the HTML

Copy this into `index.html`, then replace the text with your own.

```
<!DOCTYPE html>
<html>
<head>
  <title>My Favorite Thing</title>
  <!-- This line connects your CSS file -->
  <link rel="stylesheet" href="style.css">
</head>
```

```
<body>

  <!-- 1. Your big title -->
  <h1>Why I Love Pizza</h1>

  <!-- 2. Your picture (change photo.jpg to your file name) -->
  <img src="photo.jpg" alt="A picture of pizza">

  <!-- 3. A short paragraph -->
  <p>Write 2 or 3 sentences about your favorite thing here.</p>

  <!-- 4. Your list of reasons -->
  <ul>
    <li>Reason number one</li>
    <li>Reason number two</li>
    <li>Reason number three</li>
  </ul>

  <!-- 5. Your link -->
  <a href="https://www.wikipedia.org">Learn more here</a>

</body>
</html>
```

Step 3: Add the CSS

Copy this into `style.css`. Then change the colors and sizes to make it yours.

```
body {
  background-color: lightyellow;
  font-family: Arial, sans-serif;
  text-align: center;
}

h1 {
  color: tomato;
}

img {
  width: 300px;
  border-radius: 10px;
}
```

```
ul {
  border: 3px dashed tomato;
  padding: 20px;
  width: 300px;
  margin: 0 auto;
}
```

Step 4: Make It Yours

Try changing these one at a time and refresh your browser after each change:

- The `background-color` of the page
- The `color` of your title
- The `font-family`
- The `width` of your picture
- The `border` style of the list (try `solid`, `dotted`, or `double`)

Tip: You can use color names like `tomato` and `skyblue`, or look up color codes like `#ff6347`.

Checklist

Tick each box when you are done.

- [ ] My page has an `<h1>` title
- [ ] My picture shows up on the page
- [ ] I wrote a paragraph in my own words
- [ ] My list has at least 3 reasons
- [ ] My link opens a real website
- [ ] My CSS file is connected and my page has color

Bonus Challenges (If You Finish Early)

1. **New font:** Pick a font from Google Fonts and use it for your title.
2. **Hover magic:** Make your link change color when the mouse is over it:

```
a:hover {
  color: hotpink;
}
```

3. **Fun Facts:** Add a second section with an `<h2>` heading called "Fun Facts" and a new paragraph or list.

Stuck? Try This

- **My picture is missing:** Check that the file name and extension match exactly, and that the picture is in the same folder as `index.html`.
- **My CSS isn't working:** Make sure the `<link>` line is inside `<head>` and the file is named `style.css`.
- **Nothing changed:** Save both files, then refresh the browser.

Show Off Your Work

When you are finished, show your poster to a classmate and explain one thing you changed with CSS. Have fun!
