Mini Project: My Name Tag

HTML & CSS Course, Beginner Project

Your Mission

Build a small name tag on a web page that tells people who you are. It only needs a heading, a picture, and three short facts about you. Then use CSS to make it colorful and fun.

HTML Requirements

Your page must include all of the following:

- The basic HTML skeleton (`<html>` , `<head>` , `<body>`) and a page `<title>`
- **A heading** that says "Hello, my name is..." (use `<h1>`)
- **Your name**, big and bold (use `<h2>`)
- **One picture** of you, a pet, or an emoji, with an `alt` description (use `<img>`)
- **A list of 3 short facts** about you, such as your favorite food, color, or game (use `<ul>` and `<li>`)

CSS Requirements

Your CSS must be in a separate file called `style.css` and linked from your HTML page. It must include all of the following:

- A **background color** for the page
- A **different background color** for your name tag
- A **border** with **rounded corners** (`border-radius`) around the name tag
- Some **padding** inside the name tag
- **Centered text** (`text-align`)
- A **font family** and a **color** for your name

File Setup

1. Create a folder called `nametag` .

2. Inside it, create two files: `index.html` and `style.css`.
3. Save your picture in the same folder.

Checklist

Tick each box when you are done.

- [ ] My page has an `<h1>` and an `<h2>`
- [ ] My picture shows up on the page
- [ ] My list has 3 facts about me
- [ ] My name tag has its own background color, border, and rounded corners
- [ ] My CSS file is linked and my page has color
- [ ] I tested my page by refreshing it in the browser

Bonus Challenges (If You Finish Early)

1. **Favorite quote:** Add your favorite quote in a `<p>` tag.
2. **New font:** Choose a font from Google Fonts and use it for your name.
3. **Hover effect:** Make your name tag change color when the mouse is over it (`:hover`).

Stuck? Try This

- **My picture is missing:** Check that the file name and extension match exactly, and that the picture is in the same folder as `index.html`.
- **My CSS isn't working:** Make sure the `<link>` line is inside `<head>` and the file is named `style.css`.
- **Nothing changed:** Save both files, then refresh the browser.

Show Off Your Work

When you are finished, show your name tag to a classmate and tell them which part you are proudest of. Have fun!
